Graduates of the programme develop knowledge, skills and attributes around human dynamics, business, technology and strategy, IT Architecture, IT Quality Attributes and Environments which will support them in roles as IT Architects. The programme also equips them to carry out applied research in topics at the cutting edge in this field.

### 9. Who should attend

## Frequently Asked Questions

The aim of this programme is to produce graduates in the field of Applied Information Technology Architecture with a systematic knowledge of the key issues and technologies in the field.

Graduates of the programme will have knowledge, skills and attributes around human dynamics, business, technology and strategy, IT Architecture, IT Quality Attributes and environments which will support them in roles as IT Architects.

**Previous attendees include:**

Software developers, IT architects, systems developers, front-end developers, systems analysts etc.

**10. Is it technology agnostic or does it focus on any particular software and if so – how many modules would be focused on specific products/software/languages?**

The intention is that the M.Sc. is to be technology agnostic. Where concepts are best illustrated with examples, a variety of vendors or technology stacks are typically considered. Individual lecturers may draw on their own particular experience of a technology to illustrate a concept. Students can explore differing solutions as part of their course work.
